

UNIHUM PROJECT ROADMAP

Methodology for the Evolution of Consciousness and Artificial Intelligence

1. The Starting Challenge

Humanity has entered the age of artificial intelligence with enormous technological power while remaining deeply divided within itself.

Modern civilization has achieved an unprecedented level of technological development, yet it has not created a unified methodology for the development of the human being.

This raises a fundamental question:

What kind of human being will guide the superintelligent systems of the future?

The UNIHUM project is based on the premise that the further development of civilization requires not only the advancement of technology, but also the evolution of human consciousness.

STAGE I

Building the Conceptual Foundation (2026–2027)

Goals

- Establish the foundations of the **Methodology for the Evolution of Consciousness**.
- Develop the project's core documents.
- Engage the first researchers and developers.

Outcomes

Development of:

2. The Manifesto.
3. The Project Concept.
4. The Integral Model for the Development of Humanity.
5. The Global Dialogue Platform.
6. The first version of the Architecture of the Teaching.

Practical Steps

- Launch an invitation website.
- Conduct targeted outreach to researchers.
- Form an initial expert community of people who share an interest in the project's central questions.

STAGE II

Building an International Research Community (2027–2028)

Goal

To create an interdisciplinary space for collaboration.

Participants

- Consciousness researchers.
- AI specialists.
- Philosophers.
- Systems analysts.
- Futurists.
- Scholars from the humanities.

Key Tasks

- Refine the terminology.
- Develop a unified conceptual map.
- Establish a research program.
- Develop principles for human–AI alignment.

Outcome

The emergence of an international community working collaboratively on the evolution of consciousness.

STAGE III

Building an Intelligent Platform (2028–2029)

Core Idea

To use artificial intelligence as a tool for the exploration of consciousness.

Development of:

- An intelligent knowledge base.
- A semantic map of the Teaching.
- A system for analyzing the world's philosophical and religious traditions.
- A conversational AI model.

Platform Capabilities

- Identifying meaningful connections between concepts.
- Systematizing knowledge.

- Modeling possible scenarios for the development of civilization.
- Providing personalized support for the learning process.

STAGE IV

Educational and Cultural Implementation (2029–2030)

Development of:

- Educational programs.
- Films.
- Books.
- Interactive courses.
- Game-based models for the development of consciousness.

Goal

To make the ideas of the evolution of consciousness accessible to a broad audience.

STAGE V

Building a Planetary Community (2030–2031)

Core Objective

To facilitate the transition from a fragmented humanity toward an awareness of itself as a unified planetary community.

Key Directions

- Developing a culture of cooperation.
- Developing a global ethic.
- Overcoming civilizational fragmentation.
- Creating conditions for the emergence of a new form of humanity's collective consciousness.

Long-Term Vision

UNIHUM views humanity as undergoing a transition from an era of division toward an era of **conscious unity**.

Within this process, artificial intelligence is regarded not as an end in itself, but as an instrument capable of helping humanity:

- Systematize knowledge.
- Model possible futures.
- Explore the nature of consciousness.
- Accelerate global interaction and cooperation.

The ultimate goal of the UNIHUM project is to develop a methodology capable of contributing to the harmonious development of the human being and civilization in the new era.
